DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,4-8,12-15, and 37-39 are rejected under 35 U.S.C. 102(b) as being anticipated by Frey (6,039,336). Frey discloses a forged suspension trailing arm for a heavy vehicle comprising an integral axle locating formation that fully encircles and is welded to an axle 1 of a vehicle, a chassis mounting formation 10, and a recessed portion for facilitating fitment of a braking component 13, wherein the axle locating formation is formed of a first section and a second section, said first section including a portion of the axle locating formation and the chassis mounting formation 10 and said second section includes another portion of the axle locating formation and a bracket for mounting a spring. With regard to claim 37, the trailing arm is C-shaped, as can be seen in Fig. 1.

3. Claims 1,8, and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Chalin et al (7,007,960). Chalin et al disclose a C-Shaped trailing arm comprising an axle locating formation 12 having openings 40 in the front and back of said formation.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3,10,11,40, and 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frey (6,039,336). Frey discloses the claimed invention except for a thickness of the suspension trailing arm being a certain specified thickness or the bending strength of the trailing arm being greater in certain areas. It would have been obvious to one having ordinary skill in the art at the time the invention was made to form a thickness of the suspension trailing arm to be a certain thickness or make the bending strength of the trailing arm greater in certain areas, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
